

Lesson 7 — Case Study Questions

Analyze Character
Challenges and Choices

 **In this activity, you will** analyze a short case study to identify the **challenges** a character faces, explain how their **choices** impact the final outcome, and evaluate what **support** could have changed the situation.

Understanding Character Dynamics

To understand a story deeply, we must look at why a person acts the way they do. By examining their environment and the options available to them, we can learn important lessons about decision-making.

Key Term	Definition
Challenge	A difficult task or situation that tests a person's abilities.
Choice	An action or decision made when faced with different possibilities.
Outcome	The final result or consequence that happens after choices are made.

Read the Following Text

Read the following case study carefully. As you read, ask yourself: **What moments show the character struggling, and which actions lead to the biggest changes in the story?**

Maya was a student who loved science, but her school lacked a lab. She wanted to enter the state invention fair, but she had no supplies and no mentor to guide her. Maya felt frustrated because she had the ideas but not the tools. Instead of giving up, she chose to ask the local library for old electronics to take apart. She spent every afternoon in her garage, building a prototype out of scraps. Her teachers did not know about her project until the deadline was two days away. When she finally presented it, the judges were impressed by her creativity but noted that her design was missing a key safety sensor. Because she worked alone and had no mentor to review her plan, she missed the top prize by one point. Maya realized that while her hard work was important, she could not solve every problem on her own.

Answer the Questions

Use evidence from the passage above to **answer** the following questions.

1. What are two major challenges Maya faced at the beginning of her project?

[Write your answer here.]

2. Why did Maya choose to work in her garage with old electronics?

3. How did the lack of a mentor affect the final outcome of Maya's invention?

4. How might Maya's results have changed if she had asked for help earlier?

5. What lesson can we learn about the relationship between 'choices' and 'support' from this story?
